ACM Reference Format:
Aghiad Khertabeel and Mohamad Khaled Mnawie. 2018. The Name of the Title Is Hope. In *Proceedings of Make sure to enter the correct conference title from your rights confirmation email (Conference acronym 'XX).* ACM, New York, NY, USA, 2 pages. https://doi.org/XXXXXXX.XXXXXXX

1 Introduction

This is a placeholder for the introduction section.

The article template's documentation, available at https://www.acm.org/publications/proceedings-template, has a complete explanation of these commands and tips for their effective use.

Note that authors' addresses are mandatory for journal articles.

2 Rights Information

Placeholder for rights information.

3 CCS Concepts and User-Defined Keywords

Placeholder for CCS concepts.

4 Sectioning Commands

Placeholder for sectioning commands.

4.1 Subsection

This is a placeholder subsection.

4.1.1 *Subsubsection.* This is a placeholder subsubsection.

Paragraph. This is a placeholder paragraph.
Subparagraph This is a placeholder subparagraph.

Permission to make digital or hard copies of all or part of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for components of this work owned by others than the author(s) must be honored. Abstracting with credit is permitted. To copy otherwise, or republish, to post on servers or to redistribute to lists, requires prior specific permission and/or a fee. Request permissions from permissions@acm.org.

Placeholder for display equations section.

$$x = y + z \tag{1}$$

7 Figures

The "`figure`" environment should be used for figures. One or more images can be placed within a figure. If your figure contains third-party material, you must clearly identify it as such, as shown in the example below.

Your figures should contain a caption which describes the figure to the reader.

Figure captions are placed *below* the figure.

Every figure should also have a figure description unless it is purely decorative. These descriptions convey what's in the image to someone who cannot see it. They are also used by search engine crawlers for indexing images, and when images cannot be loaded.

A figure description must be unformatted plain text less than 2000 characters long (including spaces). **Figure descriptions should not repeat the figure caption – their purpose is to capture important information that is not already provided in the caption or the main text of the paper.** For figures that convey important and complex new information, a short text description may not be adequate. More complex alternative descriptions can be placed in an appendix and referenced in a short figure description. For example, provide a data table capturing the information in a bar chart, or a structured list representing a graph. For additional information regarding how best to write figure descriptions and why doing this is so important, please see https://www.acm.org/publications/taps/describing-figures/.

7.1 The "Teaser Figure"

A "teaser figure" is an image, or set of images in one figure, that are placed after all author and affiliation information, and before the body of the article, spanning the page. If you wish to have such a

figure in your article, place the command immediately before the `\maketitle` command:

```
\begin{teaserfigure}
  \includegraphics[width=\textwidth]{sampleteaser}
  \caption{figure caption}
  \Description{figure description}
\end{teaserfigure}
```

8 Citations and Bibliographies

The use of BibTEX for the preparation and formatting of one's references is strongly recommended. Authors' names should be complete — use full first names ("Donald E. Knuth") not initials ("D. E. Knuth") — and the salient identifying features of a reference should be included: title, year, volume, number, pages, article DOI, etc.

Using traditional BibTeX, the bibliography is included automatically. Compile with: pdflatex, bibtex, pdflatex, pdflatex

The command `\addbibresource{bibfile}` declares the BibTEX file to use in the **preamble** (before the command "`\begin{document}`") of your LATEX source where "`bibfile`" is the name, *with* the "`.bib`" suffix. Notice that `\addbibresource` takes only one argument: to declare multiple files, use multiple instances of the command.

Citations and references are numbered by default. A small number of ACM publications have citations and references formatted in the "author year" style; for these exceptions, please pass the option `style=acmauthoryear` to the `biblatex` package loaded in the **preamble** (before the command "`\begin{document}`") of your LATEX source.

Some example citations [1].

9 Acknowledgments

Placeholder for acknowledgments.

10 Appendices

Placeholder for appendices.

11 Multi-language papers
